

Bambang Gunawan Tanjung

DevOps & Cloud Operations Engineer | Samsung SmartThings Ecosystem | AWS Infrastructure at Scale

📍 Jakarta, Indonesia ✉ bambanggunawan887@gmail.com 🌐 www.bambanggunawan.id 📄 bambanggunawanid

Summary

Cloud Operations & DevOps Engineer powering infrastructure within the Samsung SmartThings IoT ecosystem on AWS, delivering Content Management Systems serving 200M+ weekly requests via CloudFront across six enterprise projects. Architected zero downtime deployments using canary and blue/green strategies on Amazon ECS and Application Load Balancer (ALB), drove 40% security posture improvement, and cut operational costs by 15%. Skilled in Infrastructure as Code (Terraform, Ansible), CI/CD automation, and cloud monitoring (Amazon CloudWatch, Prometheus, Grafana). Simultaneously leads cloud operations at Samsung R&D Institute Indonesia, and serves as Developer Lead at Wolftagon, overseeing both infrastructure and product delivery.

Experience

DevOps Engineer & Cloud Operations, Samsung R&D Institute Indonesia – Jakarta, Indonesia Mar 2023 – present

Skills: AWS (EC2, ECS, EKS, CloudFront, S3, RDS, Lambda, CloudFormation, CodeBuild, CloudWatch), DevOps, Linux, Docker, Kubernetes, CI/CD, Security Compliance Frameworks, Go

- Own and optimize AWS cloud infrastructure across 6 SRIN production environments (multi-AZ, multi-cluster, 200M+ weekly requests via CloudFront) — sustaining 99.9% uptime and driving 20-40% operational cost reduction
- Drive deployments and critical hotfixes for Samsung SmartThings CMS and Content Portal Admin — 100% deployment success rate across global rollouts
- Architected canary and blue/green deployment pipelines for SmartThings CMS on ECS/ALB — achieved zero downtime deployments across global rollouts
- Hardened security posture by resolving critical vulnerabilities across production environments — lifted Samsung Security portal score by 40%
- Designed AWS security group architecture for 3 projects per Samsung best practices — achieved 35% security posture uplift per project audit
- Architected high-availability infrastructure for 2 enterprise projects (multi-AZ ECS clusters, auto-scaling groups) — optimized performance and horizontal scalability
- Established daily AWS/VM/DB security audit checklists — sustained 100% compliance with Samsung Security Standards across all environments
- Initiated regular DevSecOps and AWS best-practice workshops
- Owned delivery of 3 critical SRIN products — achieved 99.99% service availability, exceeding the 99.9% baseline across all 6 SRIN projects

Full Stack Engineer & Developer Lead (Concurrent), Wolftagon – Indonesia Feb 2023 – present

Skills: Golang, React (Typescript), CI/CD, AWS, Lead and mentorship

- Lead development of the Kolektibles App as Developer Lead — full-stack delivery in Golang and React Vite
- Architected AWS cloud infrastructure and GitHub Actions CI/CD pipelines for Kolektibles, leading the project from inception to production deployment.
- Engineered 80+ REST API endpoints for Kolektibles (Golang) and Admin Dashboard eCommerce platform (React Vite)
- Built an async bridge system synchronizing third-party stakeholder data pipelines — eliminated data inconsistency across platforms
- Mentored 2-3 intern developers and resolved critical infrastructure blockers for the Solelands project

Skills: Java, Quarkus, Git, Maven, PostgreSQL, Postman, Microservices

- Led backend architecture for IFG LifeSaver — the insurer’s first premi product for athlete assurance, delivering core API infrastructure from ground up
- Designed UML-based system architecture and database schemas for a greenfield product initiative — accelerated development velocity by 15% through upfront design clarity
- Architected and shipped 2 microservices from scratch — delivered 40+ RESTful APIs powering the Life App (Java Quarkus, ORM JPA)
- Established code review processes and documentation standards — drove 85% reduction in post-release bug reports
- Optimized database queries — reduced API response times by 30%

Education

Universitas Brawijaya, BE in Computer Engineering – Malang, East Java

Aug 2018 – July 2022

- Published research on autonomous mobile robot navigation using Hector SLAM and Navfn algorithms (see Publications)

Publications

Autonomous Mobile Robot Navigation Using Hector SLAM and Navfn

Jan 2022

Bambang Gunawan Tanjung

Certifications

Samsung Advanced Programming (AADC) Certification — C++

Jan 2023

Skills

Cloud & DevOps: AWS (EC2, ECS, EKS, CloudFront, S3, RDS, Lambda, CloudFormation, CodeBuild, CloudWatch), Terraform, Ansible, Docker, Kubernetes, Helm, CI/CD, Linux, Security Compliance Frameworks

Monitoring & Observability: Prometheus, Grafana, PagerDuty, Datadog, AWS CloudWatch, SNS Alerting

CI/CD & GitOps: GitHub Actions, AWS CodeDeploy, Spinnaker

Software Engineering: Go, Python, Java (Quarkus), C++, JavaScript (React, Vite, TypeScript), CodeIgniter, PostgreSQL, Microservices, RESTful APIs

Languages: English (Professional Working), Indonesian (Native)
